## Important Note

The Office for National Statistics applies 'Small Cell Adjustment' to Census figures to ensure that no information about individuals can be identified. This affects the reporting of small totals. Since Parish level data contains many small values, users of these Parish Profiles must exercise caution when interpreting or quoting such figures. Small Cell Adjustment reports a 3 where the actual count is 1, 2 or 3; it can also affect larger values, for example 18 could result from the aggregation of 6 Output Areas each with Small Cell Adjusted values of 3, so the actual count could be anywhere from 6 to 18. Small Cell Adjustment can also cause variation between totals for the same variable occurring in different tables of this Profile, e.g. minor differences in total population.
